

Colstrip Power Plant in SE Montana

We are looking to fill an internship program with an Environmental Engineer (or related field) to support the ongoing environmental compliance and remediation activities related to the Colstrip Power Plant. We are looking for an upcoming junior/senior type individual to work an internship during the summer with the hopes of filling a full-time position upon graduation. Having graduated from MSU with a chemical engineering degree and being able to continue my career in Montana, I'm hopeful that we can find some students with similar interests. The posting for this position can be found at talenergy.com/careers. I can be reached at 406-748-5002 if there are any questions.
