

MISSION

Department of Chemical Engineering Montana State University – Bozeman

The mission of the Chemical Engineering Department is to provide and support professional engineering and affiliated programs within the Land-Grant framework of Montana State University-Bozeman. The primary focus of these programs is the application of engineering principles and technical methodologies for the betterment of society. Educational programs are principally oriented toward career preparation – providing students in the College with the engineering education appropriate to the challenges presented by today's complex and difficult problems. The research and scholarly programs are aimed at discovering new knowledge and applying this knowledge to help solve today's complex technical problems while maintaining a focus on the education of students. Service programs support and complement the educational and research/scholarly programs.
